

# IWC STRAP SIZER

## INSTRUCTIONS

The correct strap for your wrist size depends on two factors: your wrist size and the diameter of your watch.

### STEP 1: DETERMINE THE DIAMETER OF YOUR DESIRED WATCH

If the diameter of your desired watch is 37 mm or smaller, please use the IWC STRAP SIZER on the **left** to measure your wrist.

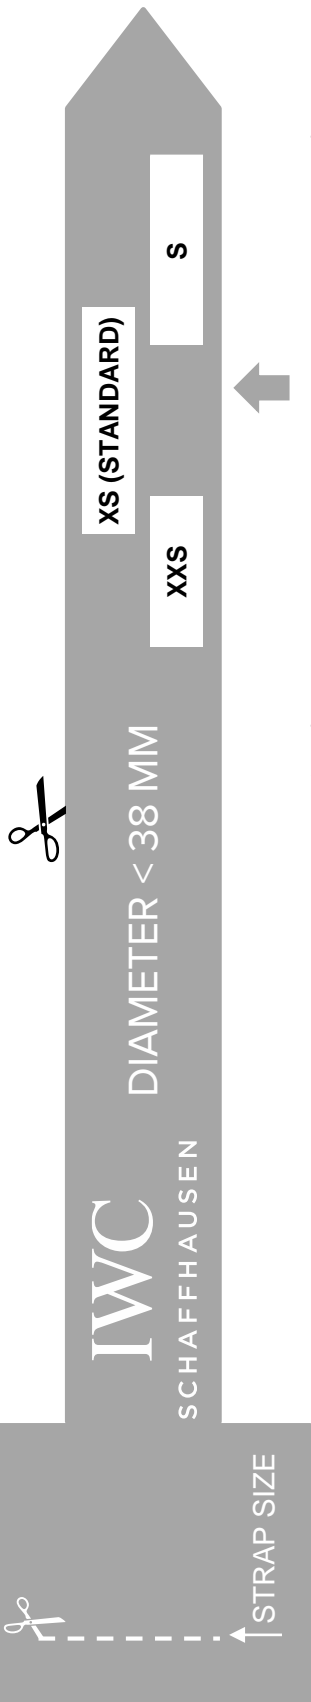

If the diameter of your desired watch is larger than 37 mm, please use the IWC STRAP SIZER on the **right** to measure your wrist.

### STEP 2: DETERMINE THE CORRECT STRAP SIZE

To determine the correct strap size, please proceed as follows:

1. Print this page at 100%.
2. Depending on the diameter you determined in *Step 1*, cut out the appropriate IWC STRAP SIZER including the small opening on the opposite side of the pointed end.
3. Measure the size of your wrist by putting the paper around your wrist with the numbers on the outside and plugging the pointed end through the small opening you have cut.
4. Pull the pointed end of the IWC STRAP SIZER until it fits your wrist comfortably. The correct strap size is indicated next to the small opening you have cut.

In case you have questions, please do not hesitate to contact our sales staff directly.

Kindly note that the recommendations represent indicative guidelines only.
